## REDUCE BLIND SPOTS AND COLLISIONS

at door openings, turns and intersections

Flashing lights alert personnel of approaching traffic through doorways or where there is obstructed visibility, therefore dramatically enhancing the safety of your personnel.

Advanced Warning Technology gives your personnel 'virtual vision', which in the long run improves productivity and also reduces harm to personnel and damage to vehicles.

Ulti Group's Advanced Warning Technology helps reduce dangerous and very costly mishaps which are common in areas where forklifts and pedestrians are active.

Collisions between forklifts and pedestrians are the second most common type of forklift accident. Our Advanced Warning Technology helps reduce these dangerous and costly mishaps. This safety light communication package uses motion sensors and LED lights to alert forklift drivers to people, objects or equipment moving on the opposite side of a closed door, door opening, blind corner, or facility intersection.

#### PROTECT ANY DOOR OPENING

Any doorways, gateways, hidden corners, insulated doors where windows are unable to be used, and can be fitting to any door type - regardless of manufacturer.

#### REGULATE TRAFFIC PATTERNS

Ensure there is a safe and orderly flow of forklift and employee traffic through your facility.

#### MONITOR BLIND CORNERS

Avoid collisions at hazardous intersections, aisle ends or anywhere vision is less than ideal.

#### IMPROVE SAFETY

Bright LED warning lights provide advanced warning of traffic for areas where visibility is reduced, and therefore maximises safety of your personnel.

#### COMPLETE SAFETY COMMUNICATIONS PACKAGE

The standard Advanced Warning package includes two Falcon\* motion sensors, and red LED lights and signs on both sides of an opening.

#### FLEXIBLE MOUNTING

Virtual Visions LED lights can be installed wherever it is the most practical and convenient for the best viewing.
