Radiation Shielding Doorsets

Ulti Group produce a range of seamless x-ray doors that are ideally suited to hospitals, laboratories and other clean areas where hygiene and x-ray protection are of utmost importance.

Our Lead lined door sets incorporate lead sheeting in a range of thicknesses. This protection extends through the door frames, forming an effective barrier to radiation in all directions. These specialist lead lined doors can be supplied in a wide variety of styles and specifications to meet resistance to the passage of x-rays in accordance with international codes and standards.

Our x-ray doors have a smooth and seamless construction which is free from voids or ledges where bacteria can build up. All doors are manufactured to have an equal appearance to doors without lead protection. Our x-ray doors are available with fire resistance, sound reduction, air pressure control and lead lined vision panels.

Key Features
