MAXIMISE SAFETY AND PRODUCTIVITY

VERTICAL STORING LEVELLER FEATURES

- Overhead door closes all the way to the pit floor, providing better environmental control over temperature and humidity extremes.
- Prevent dust, insect and rodent from entering, and the the tight seal provides additional security by minimizing points of entry when the dock is not being used.
- Vertical storing position allows for easy routine pit cleaning or full washdown.
- The maintenance/safety support system ensures safe access to the pit.
- Drive-Thru Application maintains security and environmental control.
- Protection for your closed overhead door.

A VERY SMOOTH MOVE

Rite Hite, Ulti Group's supplier of Dock products, is continually developing innovative solutions to improve loading dock safety by helping to prevent loading dock accidents, as well as helping to eliminate the serious condition known as Dock Shock from your facility.

Dock Shock is the constant jolting and jarring caused by a forklift crossing over the bumps and gaps of a traditional dock leveller, resulting in exposure to whole-body vibration.

An extended lip chamfer provides a smooth transition from the trailer bed onto the leveller.

Two-point crown control on the front lip hinge distributes the load evenly, smoothes out the transition between the leveler and the trailer bed, and extends the hinge life.

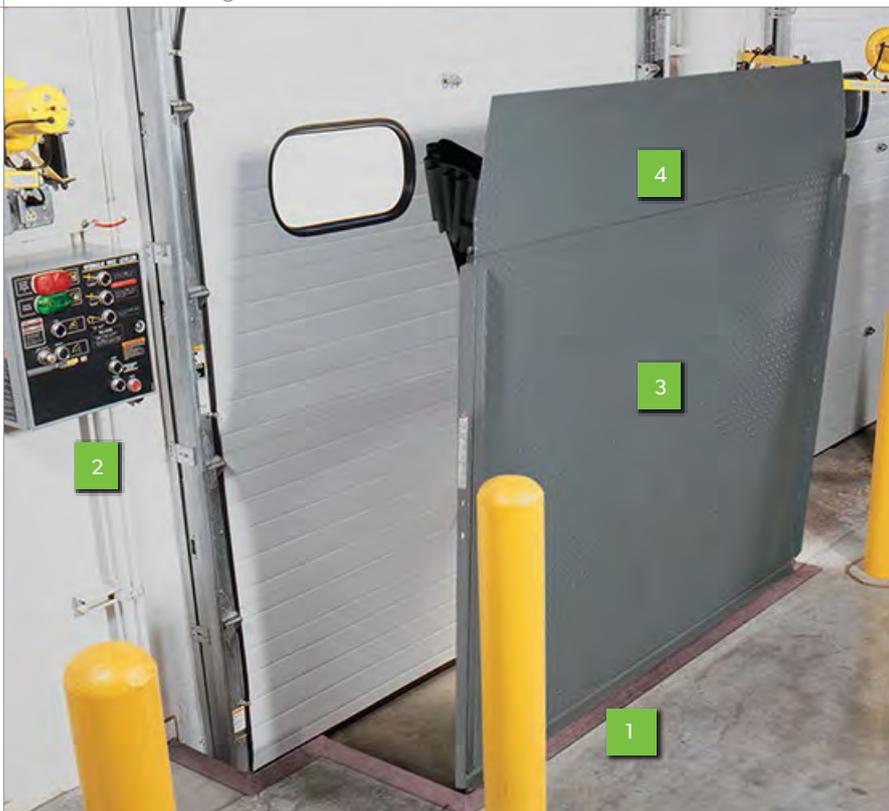

The constant-radius rear hinge creates a smooth transition between the leveler and the warehouse floor.

PIT CONFIGURATIONS TO MEET YOUR FACILITY'S NEEDS

T-STYLE PIT

The T-Style pit configuration allows access to wall-mounted controls, increases floor space for product staging and pallet storage, and eliminates gaps or "drop zones" when the platform is down.

Photo shows 6' long dock leveler.

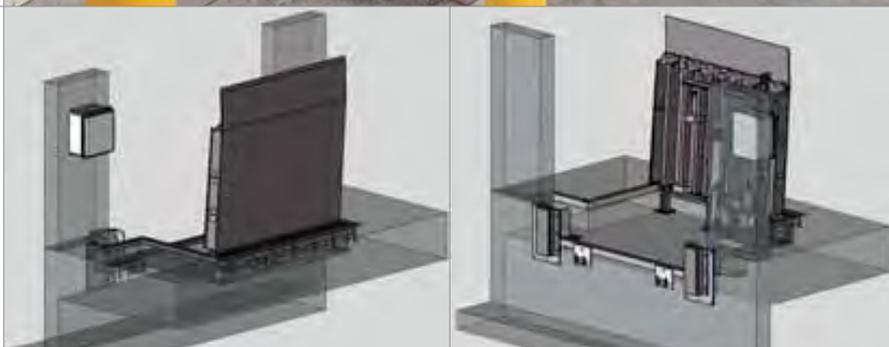

EXCLUSIVE FEATURES

Ulti Group's vertical storing hydraulic leveller is part of a total integrated system that is:

- Redesigned for today's dock traffic
- Customized for your specific needs
- Engineered to provide safer working conditions

1. Smooth transition between loading dock and trailer, reducing jolts to forklift operators and minimizing product and equipment damage.
2. Constant-pressure push-button controls keep your operator in control of the platform at all times.
3. Structural durability from a single platform and lifting cylinder and two additional beams allow for no more than 20cm of unsupported deck space, providing superior support for 3-wheel lift trucks.
4. Lip system prevents costly bed damage that could occur with powered-in and powered-out lips.

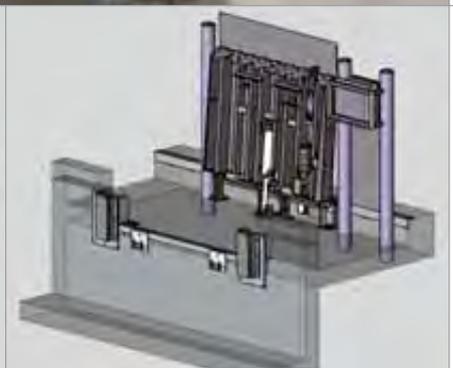

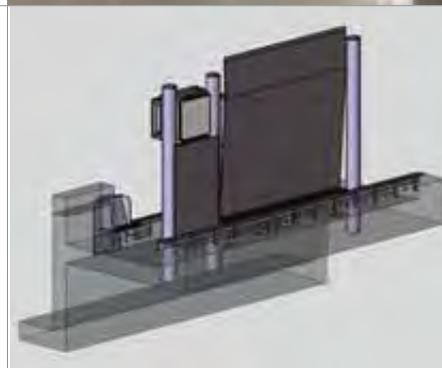

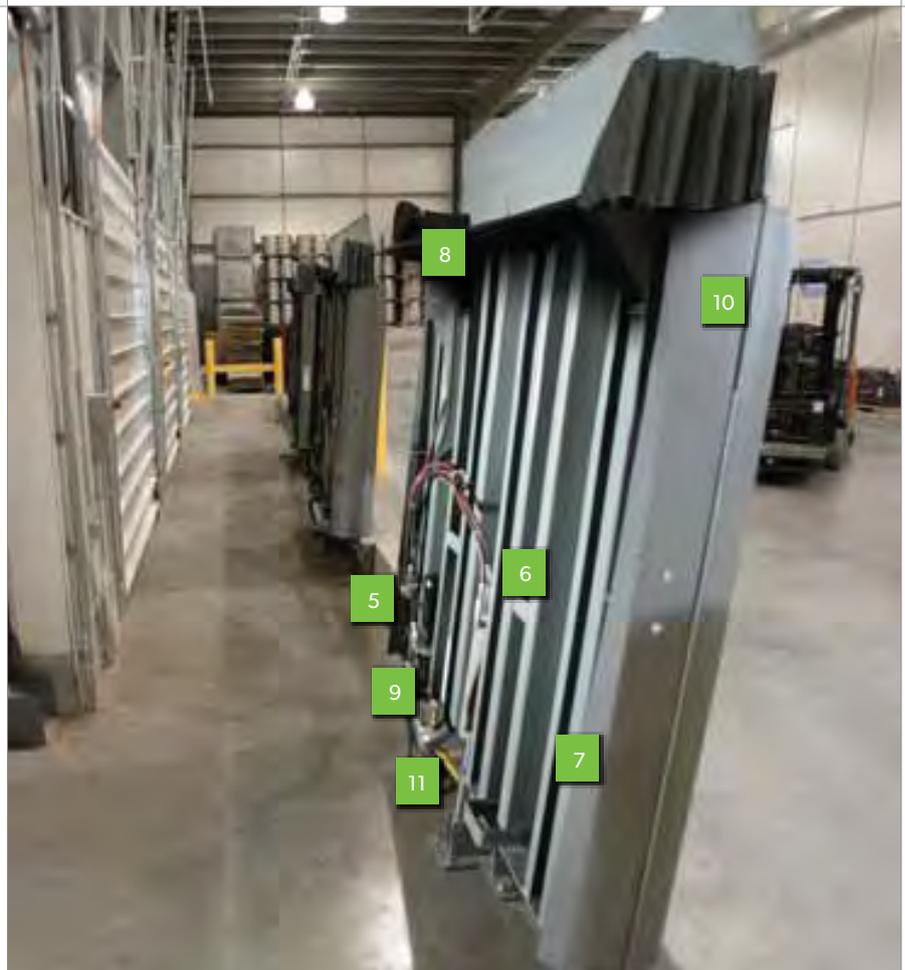

CONTINUOUS PIT

The Continuous Pit configuration allows for easy, routine cleaning or full wash-down.

5. Environmentally friendly biodegradable fluid.
6. Smooth leveller free-float – A mechanical counterbalance valve allows the leveller to float freely when a load is applied so that it constantly follows the trailer bed – even during a loss of power.
7. Power-up/power-down unit doesn't rely on gravity for leveller operation.
8. Optional under leveller seal saves energy and helps prevent dirt and debris from entering pit.
9. Pump, motor and valving can be mounted beneath the deck (shown) or can be remote mounted.
10. Run-off guards help protect a driver from accidentally driving off the side.
11. Tilt-back control stores the leveller over-center, reducing the pressure on the hydraulic system.

Photo shows 1.83m long dock leveller.

MAXIMIZE SECURITY AND ENVIRONMENTAL CONTROL

DRIVE-THRU

With Ulti Group's Drive-Thru Application, your facility is more secure and the interior climate is well maintained.

- Helps ensure an uninterrupted cold chain.
- Custom designed for your facility.

Contact Ulti Group to find out how our design experts can help implement the Drive-Thru Application in your facility.

Vertically stored over - center, allowing the overhead door to remain closed when not in use.

Trailer doors can remain closed and truck driver does not need to get out of the cab.

Dock attendant opens the trailer doors inside of the building and lowers the leveler into position.

Loading/unloading process takes place like a standard pit-mounted leveler.

YOUR TOTAL SOLUTION

The Vertical Storing Hydraulic Leveller is part of a total integrated solution developed for today's industrial markets, including:

1. Ulti Dock Seals & Shelters
2. Under Leveller PitMaster Seal
3. Ulti Vehicle Restraints
4. Dok-Commander® Combination Control Panel
5. Interlocks and interconnects help maintain safety, security and environmental control.

The optional Dok Commander Combination Control Panel serves as an operational hub for your complete dock system.

The optional Ulti Under-leveller Seal provides a tight seal against the pit floor when leveller is in use, helping to control energy loss as well as prevent dust and debris from entering the pit.
